iUser is a small application that allows you to control the user accounts on the computer on which you run it. The tool is simple to use and can easily be installed. You may add new guest users, administrators, as well as to delete certain accounts. Simplistic interface and usage iUser features an intuitive interface which consists of a small, non-resizable window, which displays individual buttons for all the functions it features. The program can retrieve system information, such as the operating system's version, system language, the partition on which the filesystem is installed, the date, as well as the currently logged on user. The program allows you to delete the specified user or add new users to

the selected group. You can also move one of the existing accounts to the group of administrators or delete them. The user passwords can be changed, in case they should forget this authentication detail. Command Line arguments and user information iUser can display a list of all the users registered on the computer, as well as all the groups of users who have access to the PC. The program can run Command Line functions using the specified arguments; simply select the Run CMD Command and enter the desired arguments. Moreover, the application can display various dialog boxes displaying the syntax of the main iUser functions. Therefore, whenever you select one of the user management functions, an Engine Message box is prompted on the screen, with details regarding the command. Easy to use program Thanks to its neat, clear-cut interface, iUser can be operated by anyone, regardless of their knowledge or skill. You need to simply select the desired function, enter the name of the user, then wait for the confirmation window. The program can notify you, regardless of the outcome of the process: success or failure. KeyMACRO is a convenient utility which allows you to create a new default keymap based on a template. The application allows you to

customize the template as well as a keymap that has a number of ready-made templates. KeyMACRO features a graphical interface, which allows you to conveniently select the keymaps to be imported into the created template. Moreover, it provides the necessary parameters to create a new keymap. The user can create a template and import keymaps and keymaps templates to use with the keymap generator. KeyMACRO offers the possibility to export keymaps and keymaps templates, which can then be imported into any keymap template or keymap generator. It is important to note that the application allows you to import keymaps and keymaps templates only into the selected keymap. KeyMACRO will also ask you to provide the target keymap. After entering the target keymap, the tool will ask for the path to the original keymap, if it does not reside on the same computer as the target keymap. Profile Protect 2.0 is a powerful tool which allows you to set and adjust your system and application settings so that they can be managed and viewed from a central location. The application can be set to show only a few applications or each one of them on the screen. A separate folder on the computer hard drive or network server can be used as a central data store for all your settings. The program also provides a system administration module which allows you to add, remove and change the settings of each user and to control the access to the settings directory. You can also use the tool to securely store passwords, clear sensitive information, such as credit card numbers and PINs. The application also features a graphical interface, which makes it easier to use than the provided command-line interface. Advantages: The tool's setup wizard allows you to create your own profiles, which can then be stored and managed using the easy-to-use graphical interface. The program can be used to manage all your application settings, such as Window, Icons, Toolbar, etc. The system administrator can create and assign user profiles. You can use the program to generate strong passwords for use with an application, including a password

history. The program features various export options, which can be used to store all your settings into a central directory on the computer hard drive. The settings of the currently logged on user can be reset to the defaults. 77a5ca646e
